TABLE 1.
5-year trends (\% per year) computed from least-squares fit to data in Fig. 1.

|  | APPLY | ADMIT | ENTER |
| :--- | :---: | :---: | :---: |
| Combined | $-\mathbf{8 . 7 \%}$ | $\mathbf{- 1 . 3 \%}$ | $-3.2 \%$ |
| 3 largest schools | $-4.1 \%$ | $+0.5 \%$ | $+1.3 \%$ |
| 6 large schools | $-8.2 \%$ | $-0.8 \%$ | $-6.1 \%$ |
| $\mathbf{8}$ medium schools | $-13.4 \%$ | $-6.9 \%$ | $-8.1 \%$ |
| 19 small schools | $-4.6 \%$ | $+4.5 \%$ | $+3.0 \%$ |

Fig. 1. Numbers of student applying, admitted and entering over five academic years. The overall average for 36 institutions is shown by the full line; the other lines are for four groups stratified by size. Line on top (diamond symbols) is for the 'largest' institutions, line lowest down (open square symbols) is for the 'small institutions.

Figure 2. Ratios of the numbers of students in the apply, admit and enter categories. Data shown here are for the totals for all 36 institutions.

TABLE 2.
Mean GRE scores and standard deviations.

|  | VERBAL | QUANTITATIVE | ANALYTICAL |
| :--- | :---: | :---: | :---: |
| Combined | $548 \pm \mathbf{5 5}$ | $\mathbf{7 1 7} \pm \mathbf{3 3}$ | $\mathbf{6 5 2} \pm \mathbf{5 0}$ |
| 3 largest schools | $571 \pm 55$ | $722 \pm 21$ | $676 \pm 38$ |
| 6 large schools | $534 \pm 56$ | $706 \pm 40$ | $631 \pm 50$ |
| 8 medium schools | $551 \pm 29$ | $731 \pm 13$ | $668 \pm 24$ |
| 19 small schools | $547 \pm 79$ | $709 \pm 53$ | $646 \pm 66$ |

Figure 3. Degrees awarded over the period 1980-1999 in atmospheric science, oceanography (including marine sciences) and the larger grouping which adds earth sciences to the previous two groups. (Source: NSF 2000b, Tables 12, 19, 41 and 43.)

Figure 4. Trends in the numbers of doctorates relative to 1999.

Figure 5. The number of Ph.D.'s earned in earth-atmosphere-ocean sciences by citizenship status. The ordinate is shown with a logarithmic scale to make relative changes easier to compare. (Source: NSF 2000a Table 3)

Fig. 6a. Ages of full-time doctoral scientific and engineering faculty, including full, associate, and assistant professors and instructors. (Source: NSB 2000b, Table 6-25.)

Fig. 6b. Age distribution of full-time doctoral science and engineering faculty at research universities and other academic institutions (Source: NSB 200b, Table 6-25)

Fig. 7: Average age of all science and engineering faculty from 1973 to 1997 (Source: NSB 2000b, Table 6-25)

Fig. 8. The age distribution of scientists with doctoral degrees in the earth/atmosphere/ocean sciences as fraction of the total (top) and in actual numbers (bottom). The total numbers for each of the three reporting periods are indicated in the legend boxes of the diagrams. (NSF 1997, NSF 2000c and NSF 2000d)

Fig. 9: Percent of doctoral scientists and engineers older than a given age.
Top: Earth/atmosphere/ocean scientists (NSF 1997, NSF 2000c,d)
Bottom: All scientists and engineers (NSB 2000B, Tables 3-19 and 6-25)

## Table 3 Data from AMS/UCAR Curricula Guide 1998 and 2000

Table 3a: Degrees in atmospheric, oceanic, hydrologic and related sciences granted over periods 1995-1997 (Fall 1995 through summer 1997) and 1997-1999 (Fall 1997-summer 1999). Number of schools reporting in ( ). "1996" and "1998" numbers are obtained by normalizing the number of degrees granted in each two-year period to a constant number of schools ( 50 for BS, 55 for MS and 46 for PhDs) and dividing by two.:

| Degree | $1995-1997$ |  | 1997-1999 |  |  |  |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- |
|  | $\#$ | \#Sch | "1996" | \# | \#Sch | "1998" |
| BS/BA | 1157 | $(53)$ | 546 | 816 | $(45)$ | 453 |
| MS | 629 | $(54)$ | 320 | 502 | $(55)$ | 251 |
| PhD | 313 | $(47)$ | 153 | 305 | $(46)$ | 153 |

Table 3.b Projections. First column are projections from 1998 Curricula Guide, second column are projections from 2000 Curricula Guide.

| Year | BS | MS |  |  | PhD |  |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- |
| $97-98$ | 511 |  | 220 |  | 113 |  |
| $98-99$ | 531 |  | 226 |  | 119 |  |
| $99-00$ | 527 | 431 | 221 | 208 | 122 | 118 |
| $00-01$ | 599 | 455 | 230 | 219 | 114 | 128 |
| $01-02$ | 621 | 514 | 234 | 213 | 132 | 119 |
| $02-03$ |  | 580 |  | 221 |  | 128 |
| $03-04$ |  | 583 |  | 219 |  | 132 |

Table 4: Three scenarios based on projected needs for Ph.Ds in the atmospheric sciences in the year 2011.
Scenario Least Need Base Greatest Need

Assumptions

| $\mathrm{Pn}(\%$ inc needed $)$ | 0 | 15 | 20 |
| :--- | :--- | :--- | :--- |

Prob retirement in 10 yrs

| $66+$ | 90 | 95 | 100 |
| :--- | :--- | :--- | :--- |
| $56-65$ | 80 | 90 | 100 |
| $<56$ | 5 | 10 | 20 |

Results

| Ph.Ds retiring in 10 yrs | 675 | 838 | 1102 |
| :--- | :--- | :--- | :--- |
| PhDs needed in 2011 | 2700 | 3105 | 3240 |
| New PhDs needed | 675 | 1243 | 1,642 |
| Avg new PhDs/year | 68 | 124 | 164 |
| Annual turnover rate |  |  |  |

[^0]
[^0]:    ${ }^{1}$ Turnover rate is defined as the number of retirements over the ten years divided by the original number of Ph.Ds ( $\mathrm{N}_{\mathrm{r}} / \mathrm{N}_{\mathrm{p}}$ ), averaged over the ten years.
